

THIS IS U.S. GRAIN

We have 3 basic kinds of corn and soybeans.

**I. Grain
produced with
U.S. approved
bio tech traits.**

**This is the
cheapest we
can produce.**

**II. Grain
produced with
no bio tech
traits. Europe
prefers this.**

**Priced higher
because it costs
more to produce
and segregate.**

**III. Organically
produced grain.**

**Priced still
higher and
costs more to
produce.**

The market will then dictate the price of each type.

The U.S. can be very competitive in
each category.
