

JOB TITLE: Stewardship & Regulatory Affairs Specialist

DESCRIPTION:

We are seeking a highly motivated person to join our Team!

This role is pivotal in developing and implementing regulatory strategies to achieve compliance for genetically modified (GM) organisms and food products derived from them.

You will work closely with Moolec's Field Operations Team to ensure identity preservation and regulatory compliance for product approvals.

RESPONDS TO: CTO

WHAT YOU'LL DO:

- **Regulatory Strategy Development:**
 - Develop, implement, and collaborate on the building of Moolec's regulatory strategies and the identity preservation program to achieve compliance for GM organisms and quality food products derived from them.
 - Prepare and submit regulatory documents such as food GRAS notifications to the US-FDA and permits and other approvals from USDA-APHIS.
 - Reviews with USDA-APHIS, compliance for shipments, seed increases and field trials permits, and others.
 - Address food and environmental regulatory obligations in other countries of Moolec's operation.
 - Work closely with the Field Operations Team to plan and execute identity preservation activities.
- **Regulatory Compliance & Documentation:**
 - Acquire necessary permits, compile and maintain regulatory compliance documentation, and report to government agencies.
 - Monitor regulations and assess potential impacts and risks posed by changing the global product regulatory framework.
 - Create and maintain compliance documents.

- **Customer & Supplier Interaction:**

- Provide customers with regulatory information in accordance with US-FDA/USDA/other agencies regulations, customer-specific guidelines, and international regulations.
- Collaborate with suppliers, customers, and other value chain participants to foster product safety management and information exchange.

WHAT YOU'LL NEED:

Master's or Bachelor's degree in agronomy, biotechnology, or a related field.

Eligibility to work in the St. Louis, Missouri, area of the United States without visa support or sponsorship.

Experience & Skills:

- Minimum of 2 years of relevant experience in the Ag-food industry, including regulatory compliance, implementing quality and identity preservation programs, or similar.
- Prior experience working with regulatory agencies such as FDA and USDA is preferred.
- Understanding of project management and planning.

Personal Capabilities:

- Ability to work collaboratively and communicate effectively across the organization.
- Commitment to continuous improvement and operational excellence.
- Strong problem-solving skills and ability to engage with cross-functional teams.
- Exhibit attention to detail, take initiative and meet tight deadlines
- Excellent communication skills, including fluency in English.
- Demonstrate high attention to detail, take ownership, and drive results.

Working Conditions/Physical Demands:

- Eligibility to work in the US without visa support/sponsorship, preferably in the St. Louis-area.
- Seasonal travel to off-station trialing locations is required for the position.

- Must possess a valid driver's license with an acceptable driving history.
- Requires working in field, greenhouse, lab, and office environments.
- Long hours may be necessary during critical growing season periods.

WHAT YOU'LL GET:

- Competitive compensation package (salary and other incentives based on execution capacity and delivery of results).
- Health insurance (medical, visual and dental coverage).
- 401k plan.
- Working experience with a diverse, multicultural, and multidisciplinary team whilst building a global company listed in NASDAQ that counts on the back-up and resources of large organizations as part of our shareholders.
